Education

Taejae University

Seoul, South Korea

B.S. in Data Science/AI & Natural Sciences (Physics)

Expected June 2027

- GPA 4.45/4.5. Matriculation Award: admitted at age 15 as the youngest student in the founding cohort, with the highest entrance score
- Global rotation, one semester per city: Tokyo, San Francisco, New York, Shenzhen, Beijing (2025–2027); Vice Student Body President, 2025

Research Interests

My goal is to build robots that understand the world as people do, learning from what they see and from what people show them, and from their own experience as well as ours.

- Imitation learning, vision-language-action models (VLAs), World Action Models (WAMs), and foundation models for manipulation
- Reinforcement learning from human interventions
- Sim-to-real and new-embodiment transfer
- Learning in deployment: policies that generate their own corrective data and update targets

Research Experience

Research Intern

June 2026 – August 2026

ROBOTIS, Humanoid Software Team

Seoul

- **Off-policy RL, sim-to-real:** rebuilt a bimanual two-bottle task in Isaac Sim, calibrated to the real AI Worker, and trained a small residual actor on the frozen policy through Physical Intelligence’s RL Token (TD3+BC). Real-robot success rose from 60% to about 82% for Prior-ACT and from 16% to about 30% for TurboVLA (LIBERO-10: 35% to 59%)
- **Human-in-the-loop learning:** built the ROS 2 teleoperation system for HG-Dagger and HIL-SERL on the AI Worker, with auto-labeled interventions. Thirty demonstrations and 13 interventions taught GR00T N1.7 a long-horizon peg-and-screw task (100% peg-in-hole, 85% grasping the driver, 40% screwing)
- Designed **Prior-ACT**, an ACT policy whose latent comes from a frozen DINOv3 scene prior: 6/10 against 4/10 for vanilla ACT, and 10–20% higher success across three robots; also designed an MoE-Diffusion policy and Gate-as-Potential, a potential-based shaping method for behavior cloning
- Benchmarked four of 2026’s newest VLAs and WAMs (GR00T N1.7, MolmoAct2, VLA-JEPA, FastWAM) on the 6-DOF OMY; asynchronous, age-weighted temporal ensembling raised GR00T’s success by 20%. Published as ROBOTIS’s AI MANIPULATOR #13 video and docs
- Open source: 6 pull requests to ROBOTIS, 5 merged, including moving Cyclo Intelligence to LeRobot 0.6.1

First Author, PDPM

2025 – 2026

Computer architecture, with Prof. Minhee Jun (Catholic University of America)

- A RISC-V core that switches among 3-, 5-, and 7-stage pipelines at runtime, picked by a 10-weight perceptron: 94.28% accuracy at +0.107% overhead on 301 benchmarks (IEEE ICCD 2026)

Equal-Contribution First Author, iPhoneme

2025 – 2026

Brain-computer interfaces, with Prof. Sung Jun Park (Taejae University)

- Built the ConformerXL decoder for a 256-electrode speech implant: 92.14% phoneme accuracy on the T15 dataset, about 3 points above the prior state of the art

Ubion Corporation, DeepCo AI education kits

Seoul

- Rebuilt the DeepCo self-driving car around the Raspberry Pi 5 (PCB, servo driver, battery pack, laser distance sensor), driven by a LeNet classifier, a 2D CNN regressor, and a YOLOv8-lite detector
- Proposed the DeepCo Board, an ESP32-S3 AI education board, and built a two-floor smart-home demo on two boards for the COEX Education Fair 2025

Teaching Experience

Guest Instructor

July 2026

Geumcheon Science Cube, Seoul

Taught 20 elementary students to train a self-driving car's AI (LeNet-5), from data collection to driving

Teaching Assistant, Taejae University

Fall 2025, Spring 2026

NS200: Physics in the Modern Society; XD221: Quantitative Thinking in the Sciences

Ran weekly TA sessions, graded problem sets, and taught supplementary lectures

STEM Instructor

July 2022 & 2023

KOICA / Korea Productivity Center, Phnom Penh, Cambodia

Trained 30 high-school science teachers each summer in Arduino, 3D modeling, and C; the course materials were adopted in four further provinces

Fellowships

Oxford-Stanford-Taejae Fellowship

Mar & Aug 2025

Kellogg College, Oxford & Taejae University, Seoul

Full funding (\$4,000)

One of 8 Taejae representatives; won 1st place in the AI Policy Debate in Seoul and presented our recommendations to Korea's Deputy Prime Minister

DYROS Robotics Bootcamp

August 2025

Seoul National University, Profs. Hyeongki Lee and Jaeheung Park

Control algorithms, motion planning, ROS, inverse kinematics, and actuator control

KAIST AI and Data Science Masterclass

Mar 2023 – Jan 2024

KAIST Center for Gifted Education

Grade: A+

Selected for the DICIA-KAIST AI Master Class on computer vision and algorithmic thinking

Honors & Awards

Talent Award of Korea, Ministry of Education 2025

Minister of Education Award, one of 60 recipients in the University / Young Adult category. Donated the entire 2 million won prize to the Geumcheon Future Scholarship Foundation.

1st Place (1 of 84), ACM CHI 2025 Student Design Competition, Yokohama 2025

1st Place, Oxford-Stanford-Taejae AI Sustainability Policy Debate 2025

Silver Medal, International Robot Olympiad, AI Autonomous Driving, Busan 2025

Gold Medal, International Robot Olympiad, AI Autonomous Driving, Athens 2024

Excellence Paper Award, KSCI Winter Conference 2024

Mayor's Commendation, Gangnam-gu, for volunteer work 2023

Before university (2021–2023): Gold Prize, Aramco Coding World Cup; Gold and Bronze Prizes, KSME Student Design Competition; 1st Place, Geumcheon Hackathon; KAIST President's Award. Five IRO medals in total, 2023–2025.

Skills

Programming: Python, C, VHDL, Verilog, SystemVerilog, Arduino, ESP32, Raspberry Pi

Tools: PyTorch, TensorFlow, OpenCV, ROS 2, MuJoCo, Isaac Sim, Isaac Lab, LeRobot, W&B, SolidWorks, 3D printing, Git, LaTeX

Domains: VLAs and WAMs, imitation and reinforcement learning, human-in-the-loop learning, sim-to-real, CPU architecture, IoT

Certifications

GPA 4.45/4.5

GRE 326 (V162, Q164)

TOEFL iBT 118/120

HSK Level 4

OPIc Advanced Low

Generative AI Expert Level 2

Volunteer Work

U9 Change (2021 to now): connecting Korean sponsors with the children they support in Kenya and South Sudan; Excellence Award, 2023. Hosanna Church meal delivery for elderly residents living alone (2021–2023); Gangnam-gu amphibian conservation (2023); Geumcheon science classrooms.
